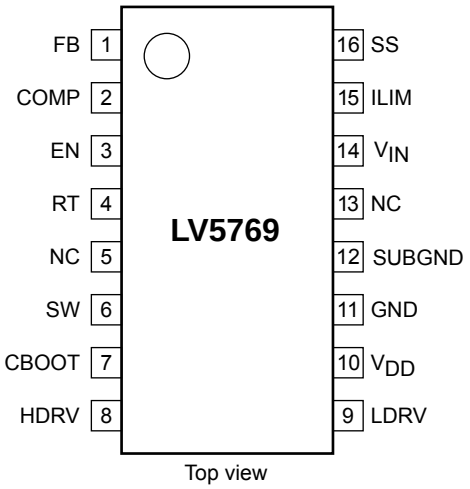
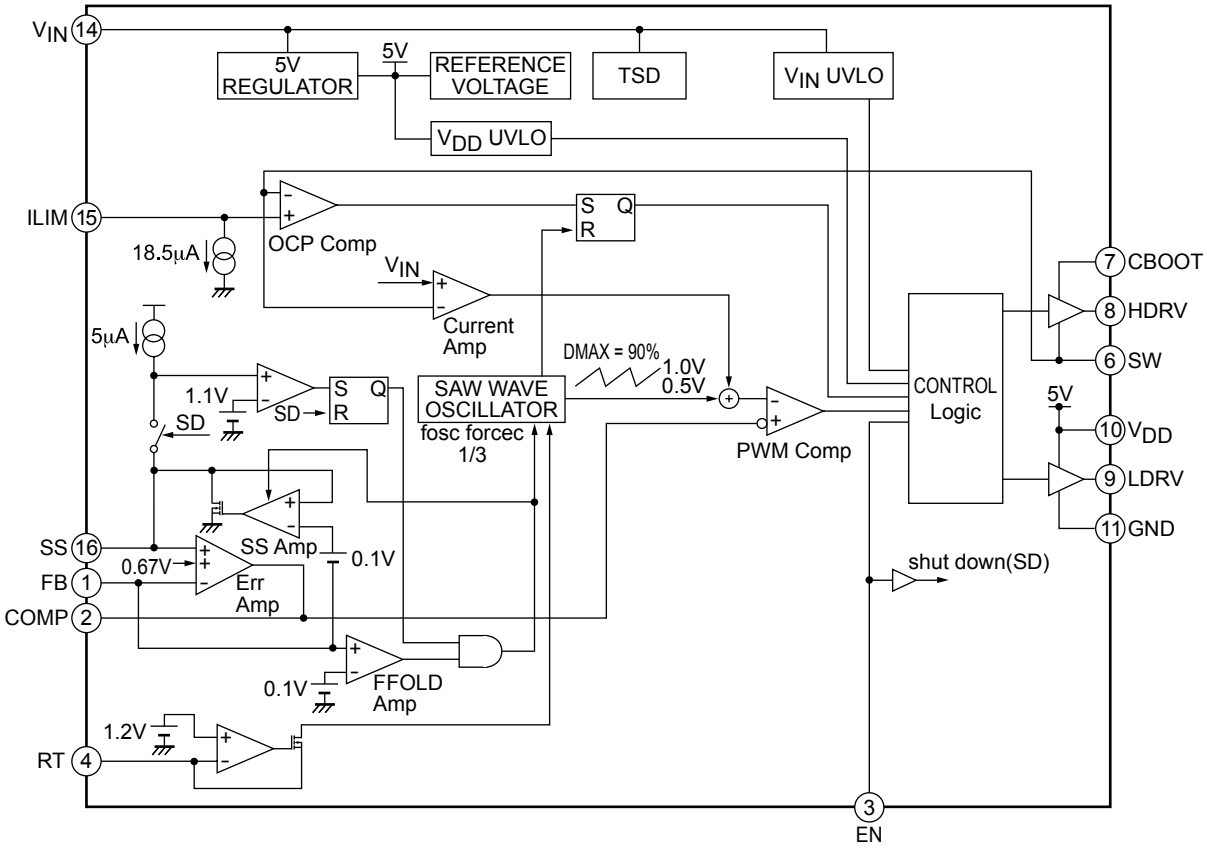
Pin Assignment



Block Diagram



Pin Function

Pin No.	Pin name	Description
1	FB	Error amplifier reverse input pin. By operating the converter, the voltage of this pin becomes 0.67V. The voltage in which the output voltage is divided by an external resistance is applied to this pin. Moreover, when this pin voltage becomes 0.1V or less after a soft start ends, the oscillatory frequency becomes 1/3.
2	COMP	Error amplifier output pin. Connect a phase compensation circuit between this pin and GND.
3	EN	ON/OFF pin.
4	RT	Oscillation frequency setting pin. Resistance is connected with this pin between GND.
5,13	N.C.	No connection *2
6	SW	Pin to connect with switching node. Upper part NchMOSFET external a source is connected with lower side NchMOSFET external a drain.
7	CBOOT	Bootstrap capacity connection pin. This pin becomes a GATE drive power supply of an external NchMOSFET. Connect a bypath capacitor between CBOOT and SW.
8	HDRV	An external the upper MOSFET gate drive pin.
9	LDRV	An external the lower MOSFET gate drive pin.
10	V_{DD}	Power supply pin for an external the lower MOS-FET gate drive.
11	GND	Ground pin. Each reference voltage is based on the voltage of the ground pin.
12	SUBGND	It is connected with the GND pin of 11pin internally. *3
14	V_{IN}	Power supply pin. This pin is monitored by UVLO function. When the voltage of this pin becomes 8V or more by UVLO function, The IC starts and the soft start function operates.
15	ILIM	Reference current pin for current detection. The sink current of about 18.5μA flows to this pin. When a resistance is connected between this pin and V_{IN} outside and the voltage applied to the SW pin is lower than the voltage of the terminal side of the resistance, the upper NchMOSFET is off by operating the current limiter comparator. This operation is reset with respect to each PWM pulse.
16	SS	Pin to connect a capacitor for soft start. A capacitor for soft start is charged by using the voltage of about 5μA. This pin ends the soft start period by using the voltage of about 1.1V and the frequency fold back function becomes active.

*2: There is no problem even if it connects it with GND.

*3: Short-circuited and use 11pin and 12pin as GND.
